

## Model 1: (continued)

Consider graph *A*. Once again we have a directed graph with weighted edges. However, instead of thinking of the weights as some sort of length, we will now think of them as a *capacity*: the "max-imum amount of stuff" that the edge can carry. For example, the capacity might be used to model things like:

- maximum gallons of water per minute that can flow through a pipe;
- maximum number of trucks per hour that can drive along a road; or
- maximum number of times a certain resource can be used before it is all used up.
- 1 Consider graph *B*. How is it related to graph *A*?
- 2 What do the blue edges in graph *B* all have in common?
- 3 What do you think the labels on the edges of graph *B* represent?
- 4 Now consider graph C. Why do you think some of the edges are green?
- 5 Graph *D* is invalid! In fact, there are two things wrong with it. What are they?

**Definition 1.** A *flow network* is a directed graph G = (V, E) with

- a distinguished *source* vertex  $s \in V$ , with only outgoing edges;
- a distinguished *sink* or *target* vertex *t* ∈ *V*, with only incoming edges;
- a *capacity function*  $c : E \to \mathbb{R}^+$  assigning a non-negative real number capacity c(e) to each edge  $e \in E$ .
- 6 Is graph *A* a flow network? Why or why not?

Now let's define a *flow*. Both graphs *B* and *C* depict valid flows on *A*; graph *D* does not.

**Definition 2.** A *flow* on a flow network *G* is a function  $f : E \to \mathbb{R}^+$  assigning a non-negative flow f(e) to each edge, such that

- 1. \_\_\_\_\_  $\leq f(e) \leq$  \_\_\_\_\_ for every  $e \in E$
- 2. At each vertex  $v \in V$  other than *s* and *t*,

**Definition 3.** The *value* of a flow, v(f), is the sum of the flow on all edges leaving *s*.

- 7 What is the value of the flow on graph *B*?
- 8 What is the value of the flow on graph *C*?
- 9 Make a conjecture about the relationship between the value of a flow and the amount of flow entering *t*.
- 10 For each amount, say whether you can construct a flow on graph *A* with the given value.
